Designed by Dion and Richard Neutra

Kettal has replicated the design by Dion and Richard Neutra, while updating the materials and construction techniques. All the structural details, as defined by its creators, have been adhered to.

"This house – in its free relation to the ground, the trees, the sea – with constant proximity to the whole vast order of nature, acts as a re-orientator and 'shock absorber' and should provide the needed relaxations from the complications arising from daily problems."

The most outstanding morphological traits are:

1 > Predominantly horizontal lines, emphasised by the wooden strips running across the structure, protruding 500 mm at the ends. Richard Neutra himself referred to them in various texts, as:

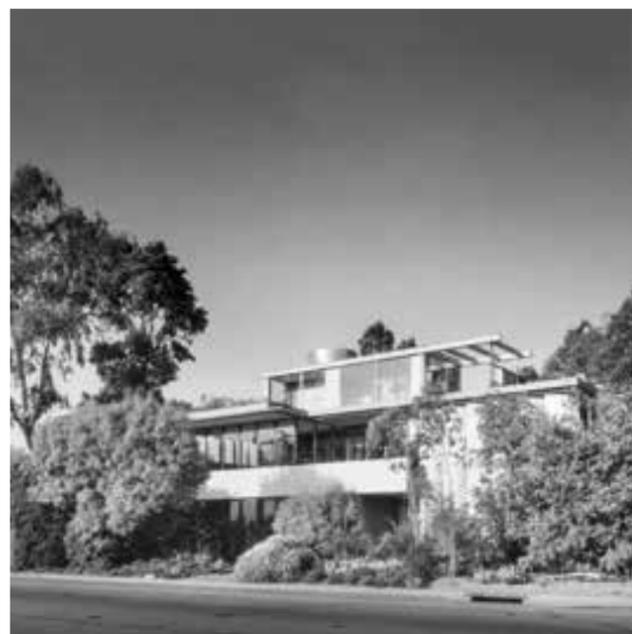

"Traditional Japanese architecture is horizontal; space is exclusively horizontal. Without a defined centre or axis, it extends as an aggregate of rooms of equal value, none of which is complete except in relation to the others. The space is flexible and transferable, without a fixed function. The use of the rooms varies over the course of the day and throughout the year."

2 > The columns are set back 100 mm to give full prominence to the roof. In addition, the columns are understated and the roof is slightly oversized. In spite of its formal strength, to some extent it seems as if the roof is floating lightly over the shell of the house.

3 > The characteristic chimney on the roof has been maintained, which houses the light sensors, air-conditioning unit and a small weather station. The technology used by the architect in this project is still quite astonishing even today, evidenced by the complex electrical installation, the special lighting systems, the telephone installation, the projectors, the electric stoves, the radio, the signage system and the temperature control device. This whole technological deployment has been updated with the development of a specific smart system to control everything in the house: air-conditioning, central heating, lighting, etc.

4 > The trellis structure continues beyond the roof to create an open space that can be used for different activities, while at the same time, accentuating the horizontal nature of the building.

VDL Research House

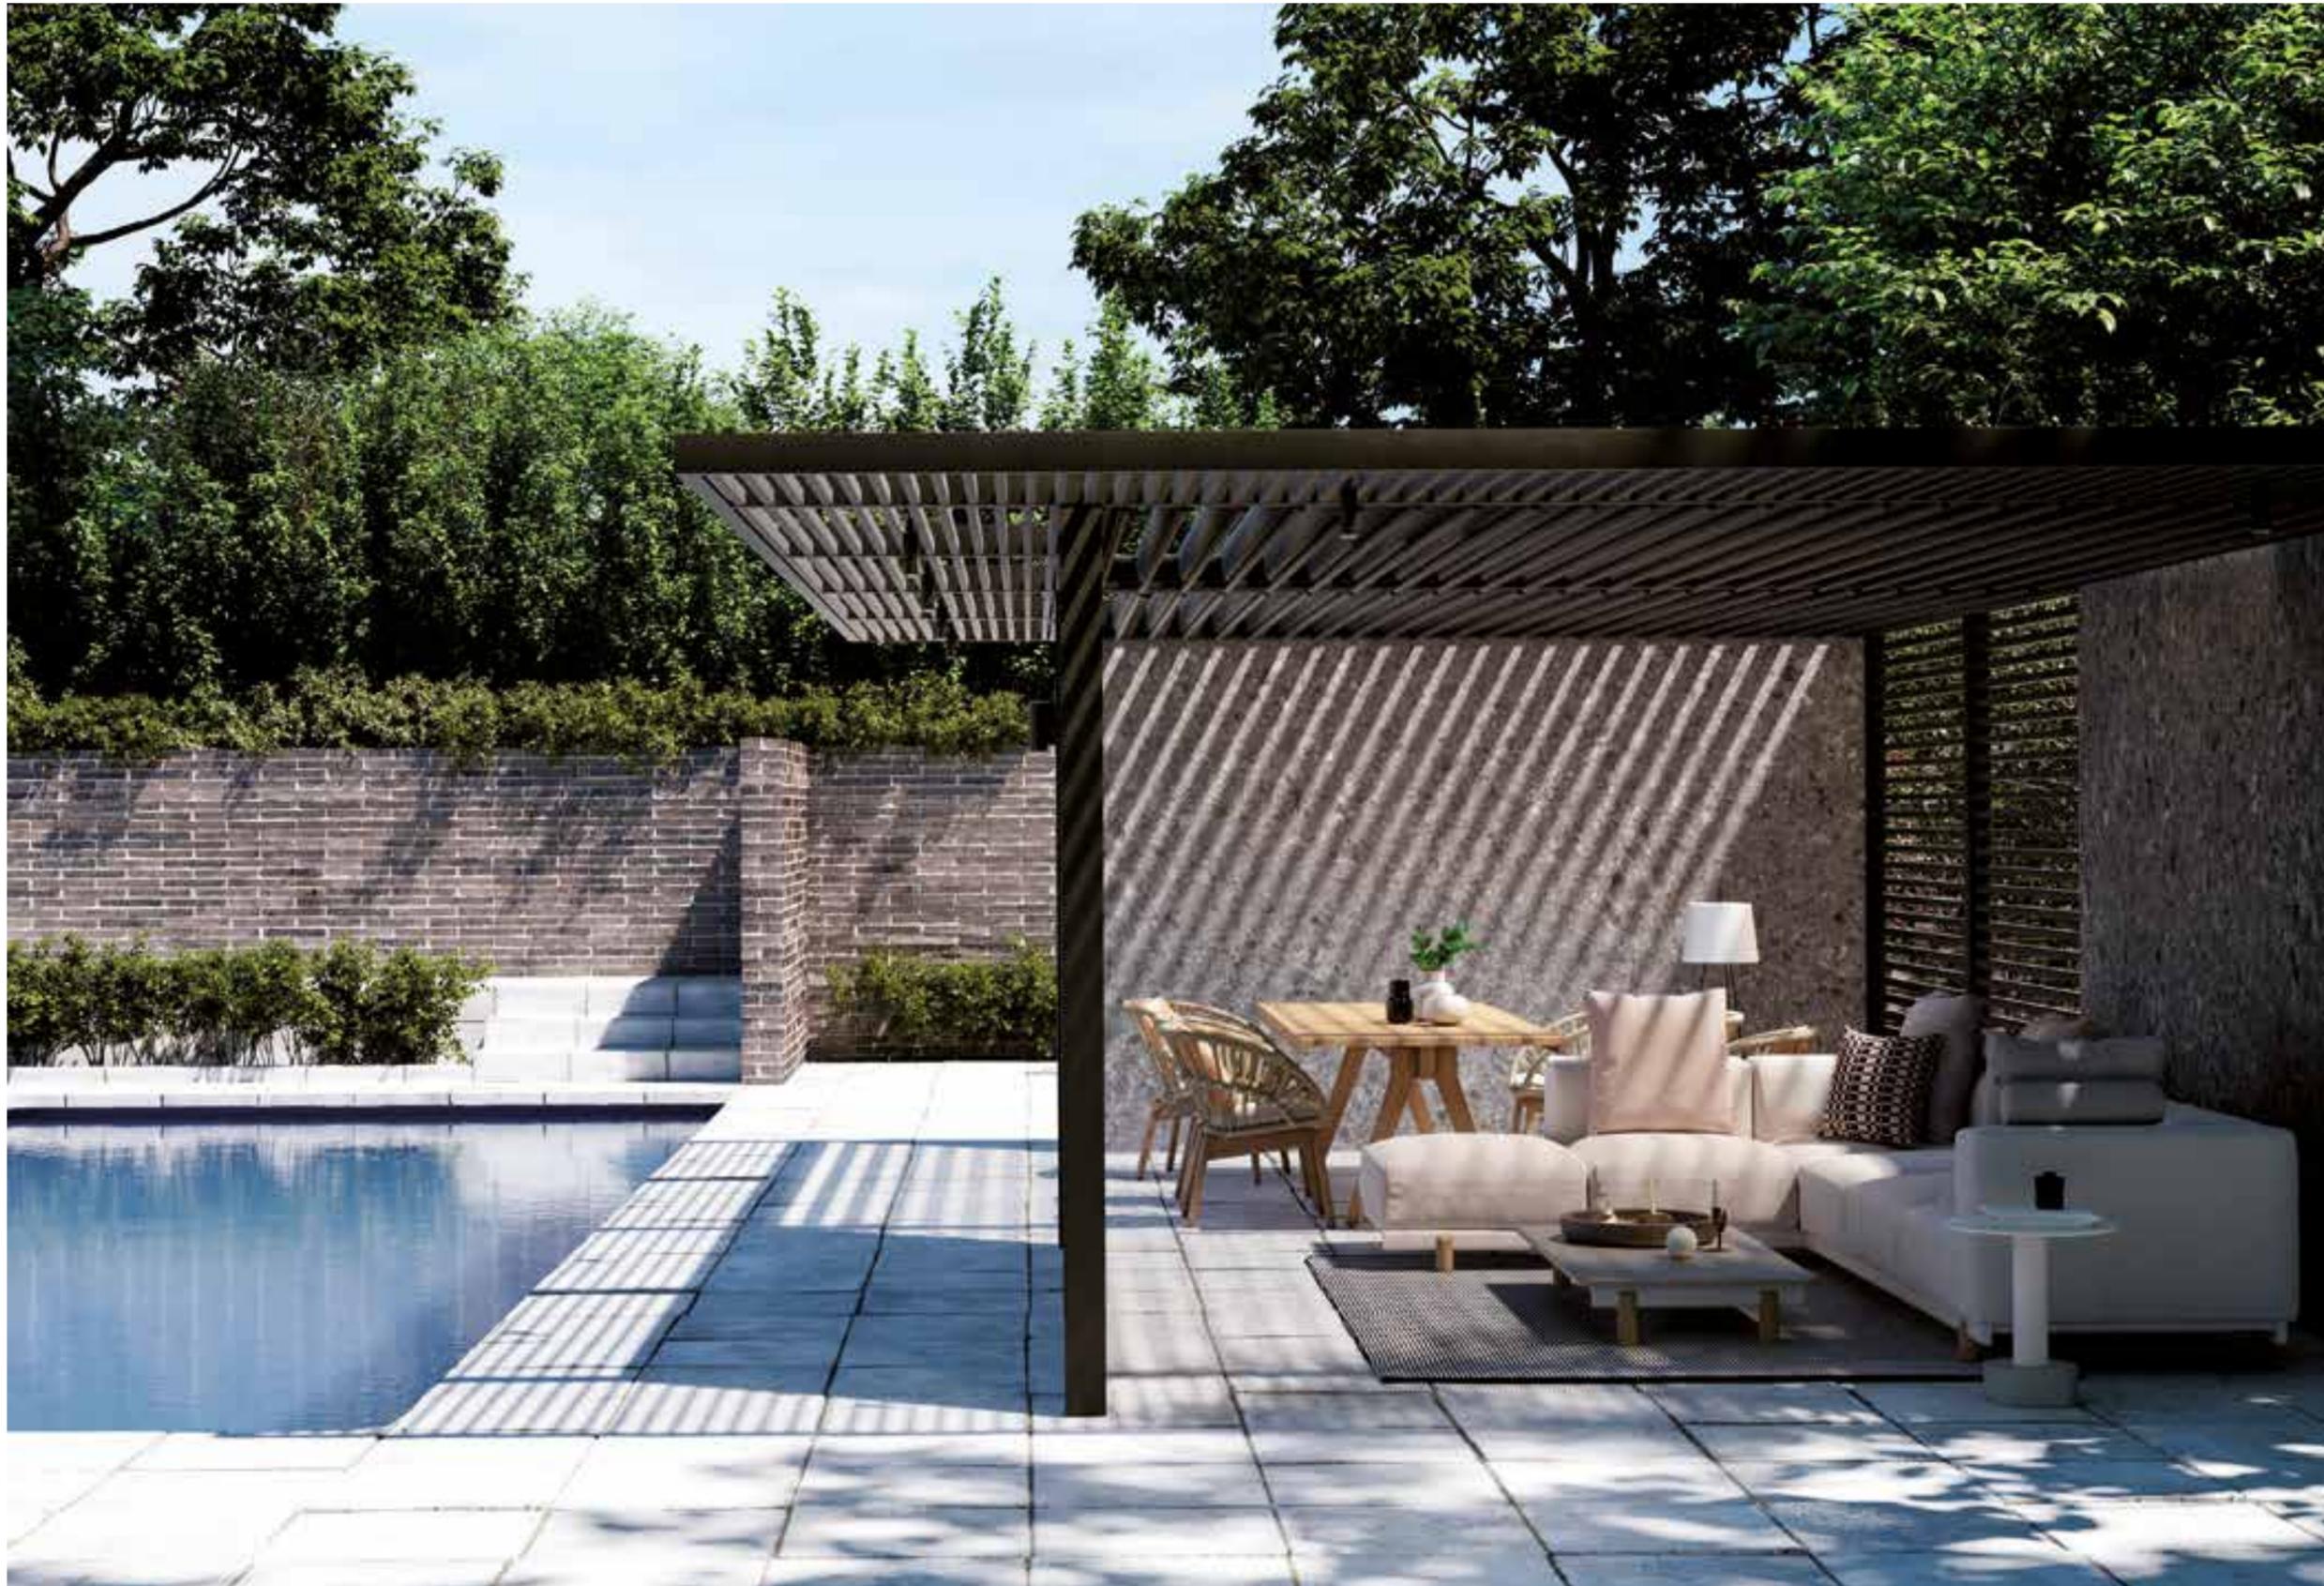

In 1932, Richard Neutra built his house thanks to a donation from the Dutch philanthropist Dr Van Der Leeuw (hence the acronym VDL). This house is a particularly important example of Richard Neutra's work because it encapsulates all the architectural theories that he first posited in his book *Wie Baut amerika?*, 1927 and later on in his more philosophical reflections *Survival Through Design*, 1953.

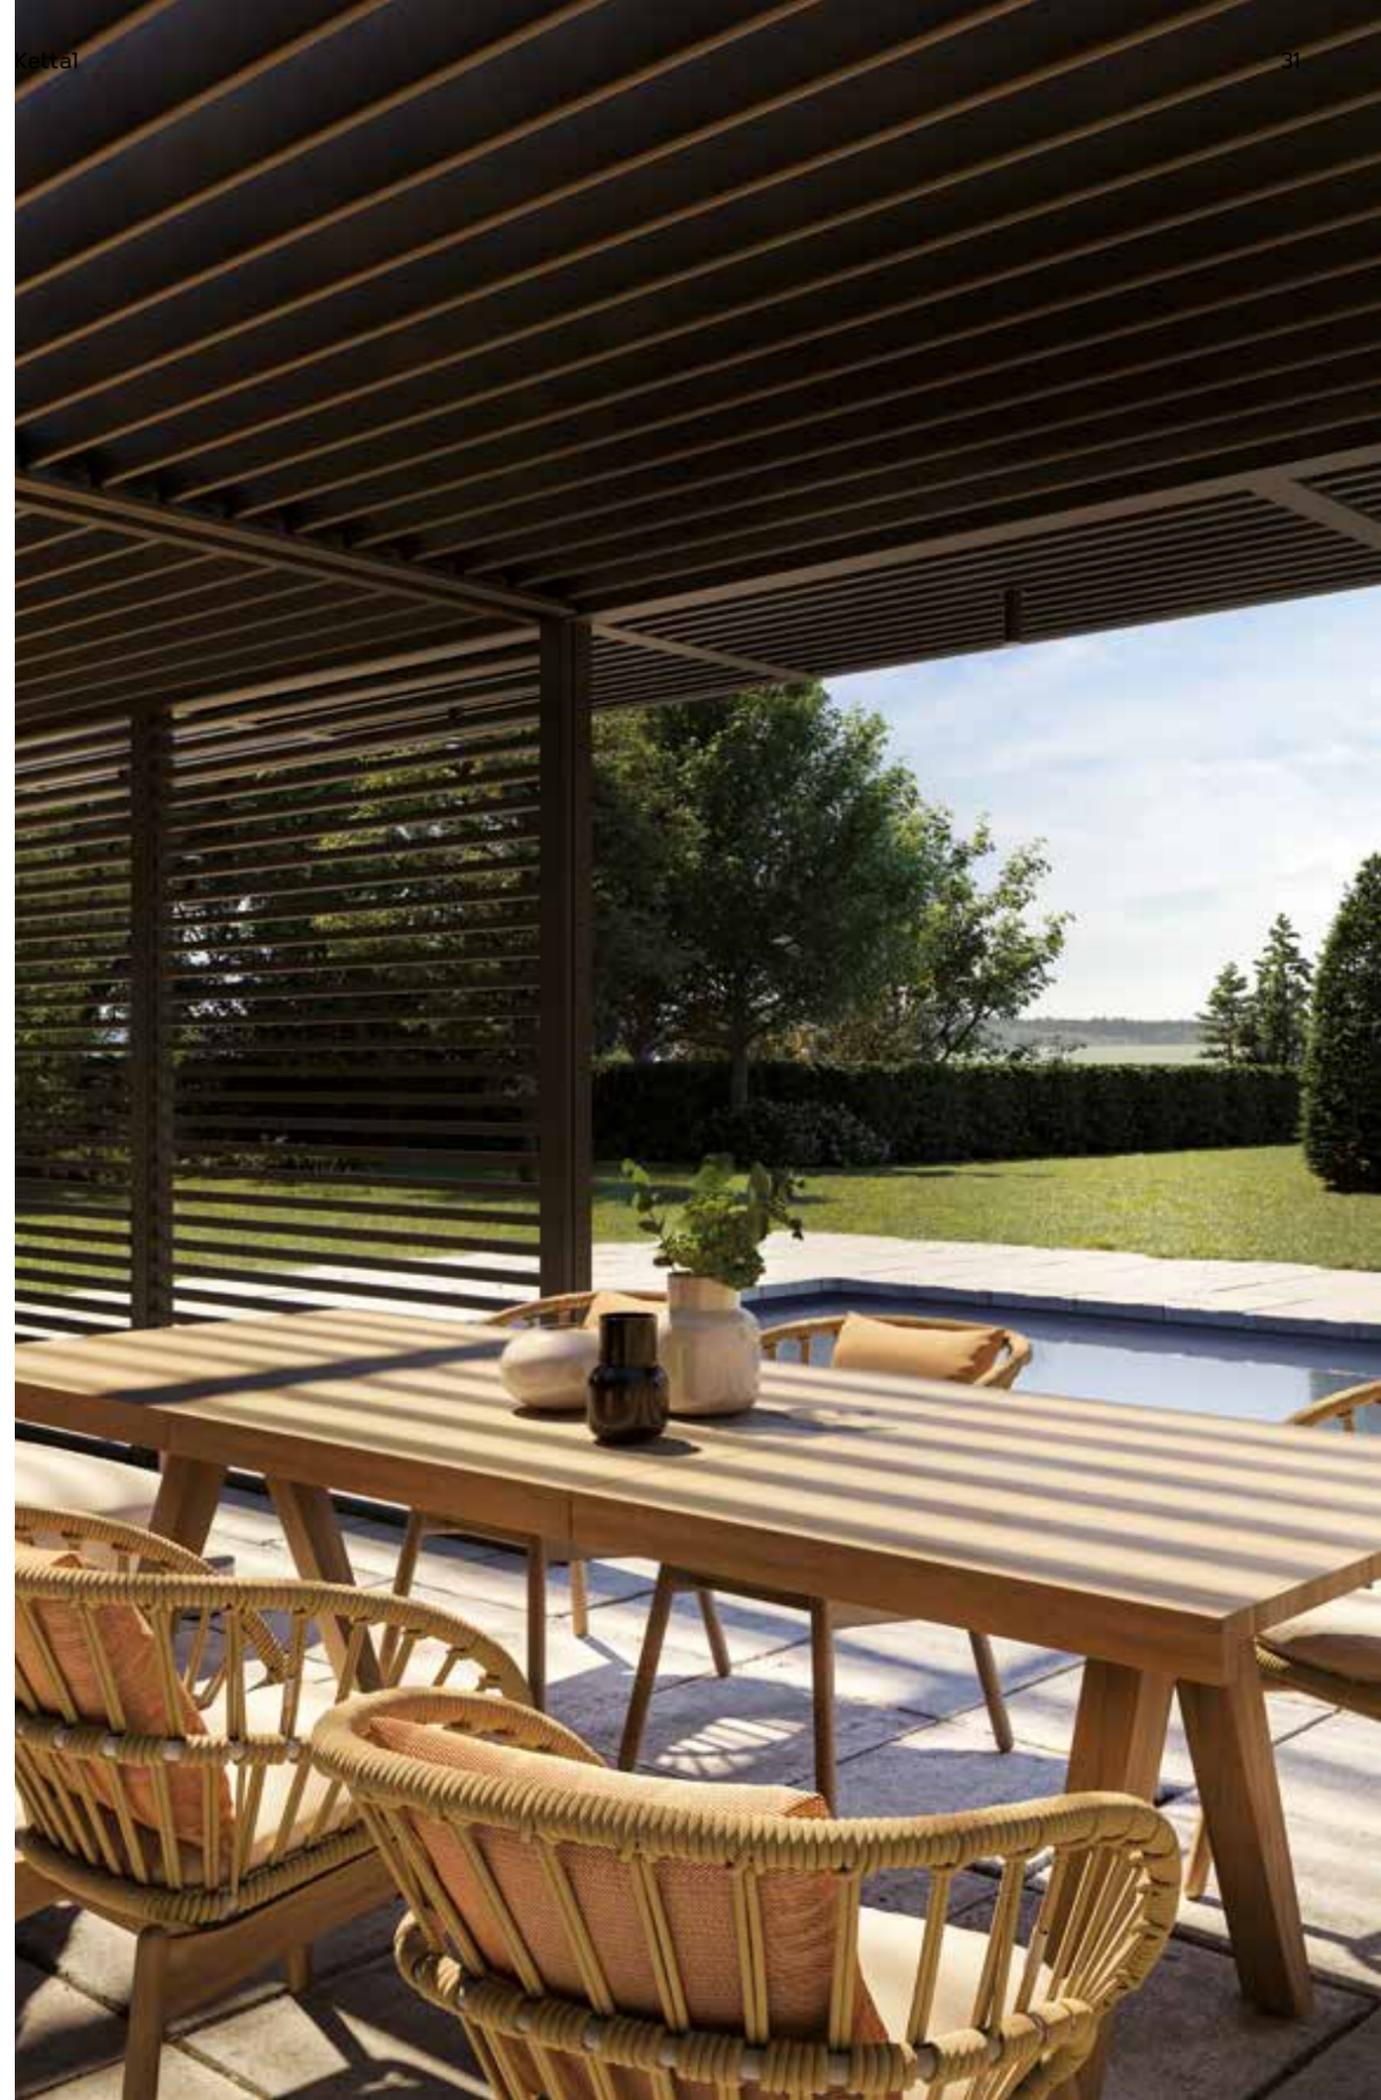

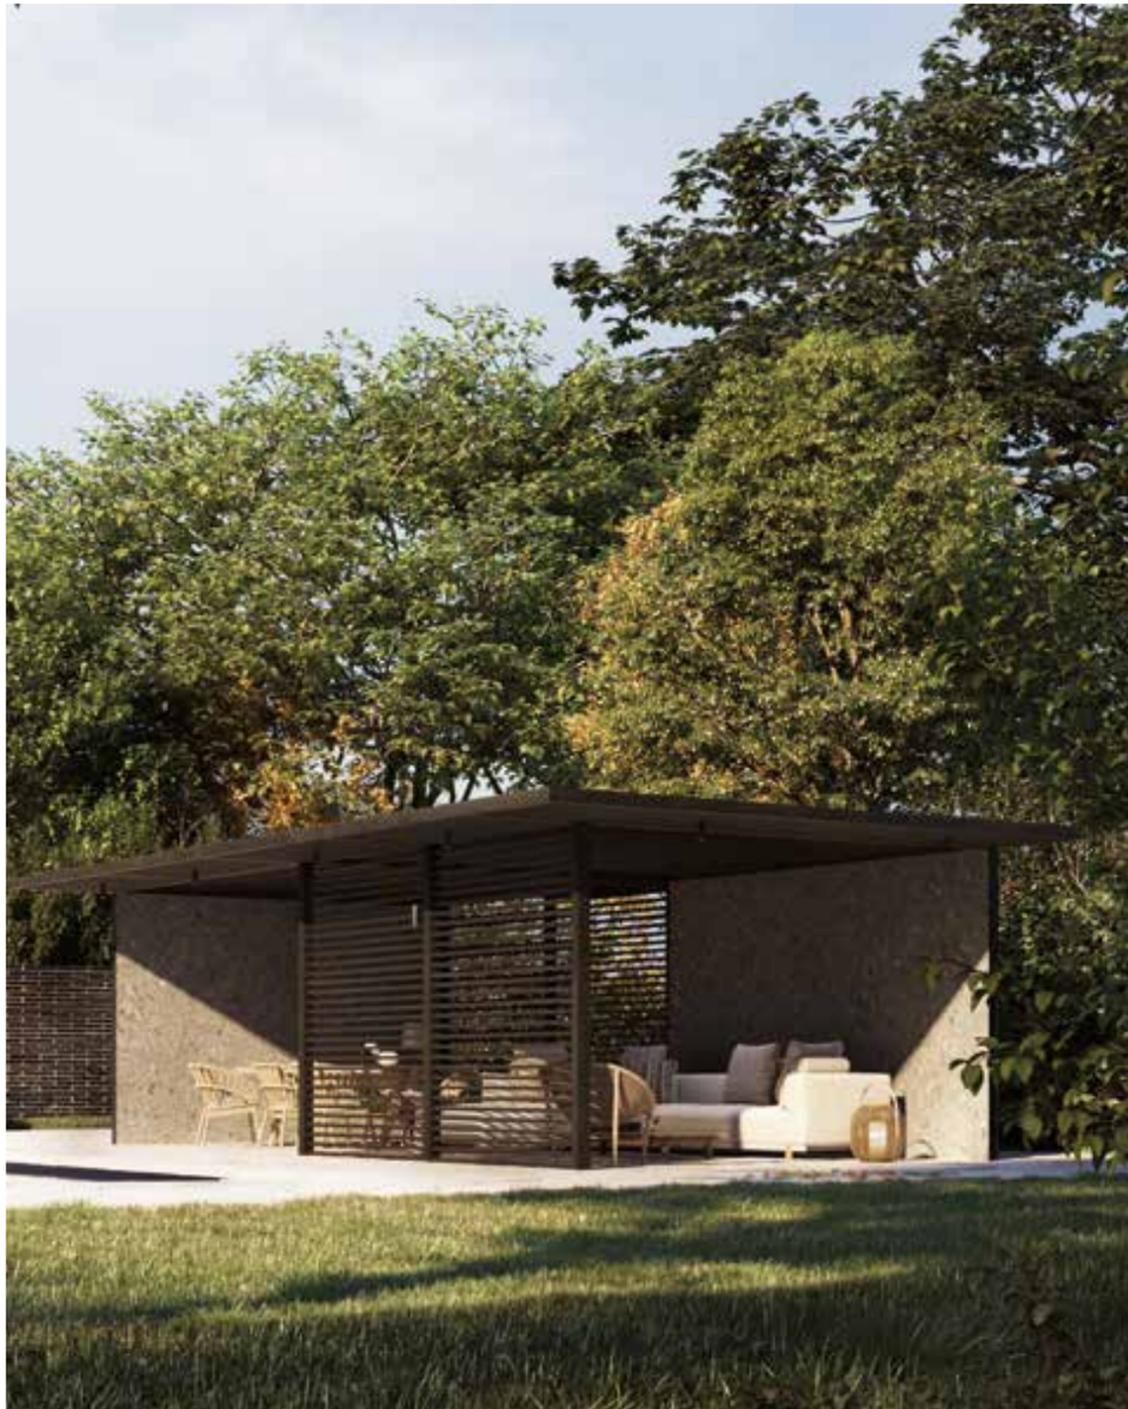

Seven years later, when the family had grown, he built an annex in the garden. In 1963, the house was devastated by fire, leaving only the annex standing. At that time, Richard Neutra and his son and colleague Dion Neutra rebuilt the house and added a solarium/atrium on top of the original structure. He incorporated everything he had learned over the years in this reconstruction: modularity, natural climate control, water roofs, interaction with the natural environment, technological advances, etc.

Apart from being his home, the VDL Research House was also his office. In this building, over 30 years, he designed hundreds of international projects. Some of the most representative architects from the Modern American movement also spent time in his practice as apprentices. The house was also a meeting point for the cultural milieu of those times, with visitors such as Julius Shulman, Frank Lloyd Wright, Alvar Aalto, Charles and Ray Eames, Jørn Urtzon and László Moholy-Nagy.

In 1990, on the death of Dione Neutra, Richard Neutra's wife and Dion's mother, the house was donated to the California State Polytechnic University, Pomona.

Waranty terms

For domestic use, all products, except for cushions, covers and fabrics (including textilines), are guaranteed for a period of five years against any manufacturing defect that affects their suitability for use. This applies to normal conditions of use and maintenance. This guarantee does not apply to faults or imperfections resulting from the passage of time or normal wear and tear. Circumstances not covered by this guarantee include, but are not limited to, the fading or change in shade of colours, changes in wood texture, scratches resulting from use, etc. For non-domestic use, by the hotel and catering industry and collectives for example, all products, except cushions, covers and fabrics, are guaranteed for a period of two years. This guarantee is subject to the same conditions as outlined above.

Technical specifications

Committed to innovation and quality, Kettal's collections are manufactured to the strictest quality standards, from the selection of the materials, to the quality and safety testing of the furniture.

IMO Certification

Upon request, we can certify our products under the IMO standards.
