

Dresswall®

The Lightness
of Communicating

Dresswall è un sistema costruttivo evoluto che permette di realizzare elementi di comunicazione luminosi e leggeri. Senza limiti.
Dresswall is an advanced construction system that allows to create bright and light communication elements. With no limits.

Attraverso la combinazione di profili in alluminio e tamponamenti in tessuto o altri materiali, è possibile realizzare pareti, display e volumi di qualsiasi dimensione. Dresswall è un sistema leggero, veloce da montare e smontare, facilmente trasportabile ed adattabile ad ogni esigenza, attraverso forme e colori che esprimono l'identità di ognuno.

I tessuti stampabili diventano superfici dove comunicare, con la possibilità di illuminarli e sostituirli in modo semplice e rapido. Grazie alla resistenza dei suoi materiali, liberi da solventi e conformi alle normativa di reazione al fuoco, Dresswall è idoneo sia per spazi interni che esterni, sia pubblici che privati.

The various combinations of aluminium profiles, fabrics and other materials allow you to create walls, communication panels and exhibition spaces of any size. Dresswall is light, quickly assembled and disassembled and easily transportable; its range of shapes and colours will suit your needs and express your identity.

Thanks to its printable materials, which can be easily and quickly lit and replaced, you will be able to communicate your ideas. Its materials are resistant, solvent-free and comply with the EU standards for fire protection; that's why Dresswall is perfect for private or public interiors and exteriors.

I nostri prodotti Our products

Il sistema Dresswall oltre ad essere impiegato in allestimenti temporanei, viene anche utilizzato come elemento costruttivo in architettura e nell'arredo. Superfici luminose di grandi dimensioni, in spessori così ridotti, hanno un potenziale espressivo e funzionale finora inimmaginabile.

The Dresswall system as well as being used in temporary installations, is also used as a structural element in architecture and furnishings. Large bright surfaces, in such low thicknesses, have an expressive and functional potential unimaginable until now.

Illuminazione Lighting

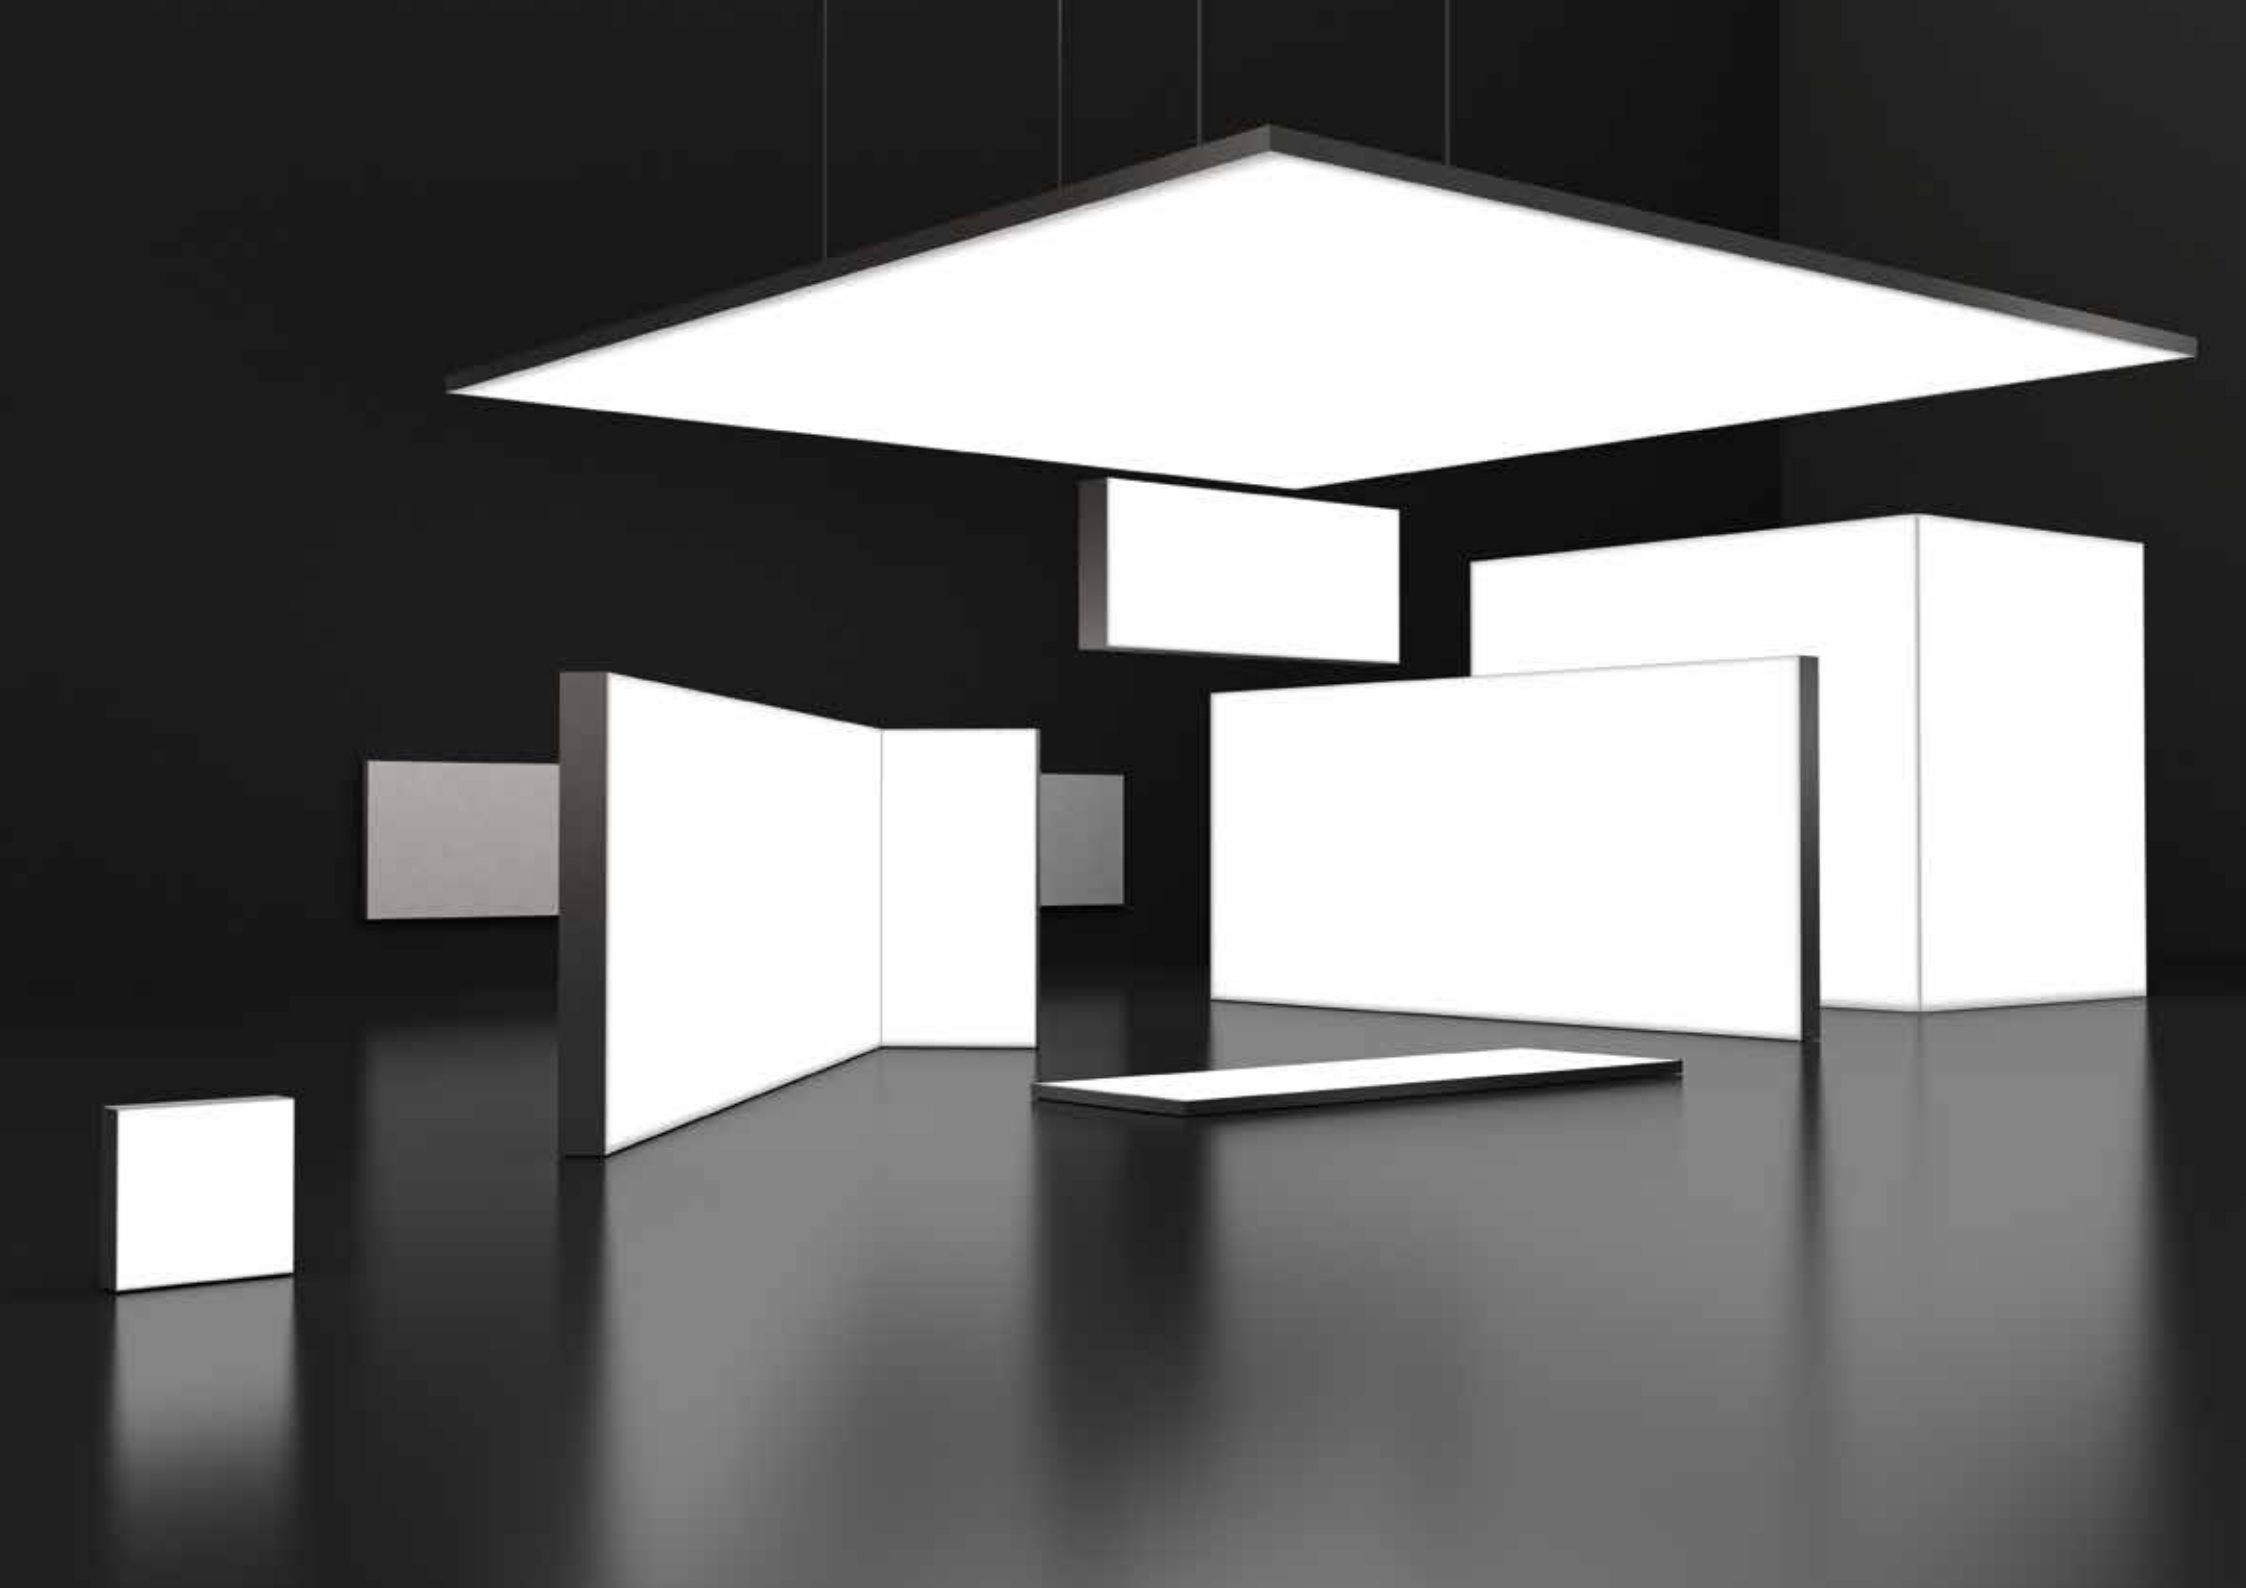

I profili Dresswall sono predisposti per la retroilluminazione. I moduli LED, ad alta potenza, garantiscono una luminosità superiore, intensa ed uniforme e consentono un sensibile risparmio dei costi di energia; sono installabili in pochi minuti, senza ulteriori strumenti o competenze.

Dresswall profiles are designed for backlighting. High power LED modules offer high-quality and intense brightness, as well as a remarkable reduction in terms of energy consumption and costs. They can be installed in few minutes, without any specific instrument or skills.

Rivestimenti Coverings

Il punto di forza di Dresswall sono le superfici personalizzabili. Tutte le strutture prevedono la combinazione di profili in alluminio e rivestimenti in tessuto e non. Il maggior vantaggio è dato dalla stampa sulle superfici di qualsiasi soggetto, con un processo di stampa diretta a 8 colori, caratterizzata da una resa ottimale e da colori brillanti. I tessuti Dresswall sono estremamente leggeri, veloci da posizionare e resistenti ai raggi UV; sono stabili, durevoli e ignifughi secondo la direttiva EN13170, pertanto adatti ad ogni ambiente, sia interno che esterno. Tutti i tessuti, sul retro, possono essere dotati di materassi acustico, che rendendo le strutture Dresswall fonoassorbenti.

The strength of Dresswall lies in its personalizable surfaces, thanks to the possible combination of aluminium profiles, fabrics and other materials. Furthermore, the greatest advantage we offer you is the opportunity to print anything you want on the surfaces of you Dresswall. Our 8-hour direct printing process provides in fact great results and bright colours. The materials are extremely light, easily installed, UV resistant; durable and fireproof (in accordance with the requirements of EN13170), so they are suitable for both interiors and exteriors. It's also possible to have the panels covered with a soundproofing mat installed on their back, so that they become sound absorbing.
