Awarded “Good design award 2013”

A Stainless Steel System Kitchen  
Combining Functionality with Beauty

The Grad45 System Kitchen, offering sanwacompany's finest. From the luxurious feel of the stainless steel to the 45° cuts on the corner joints, the attention to detail brings the best of this clean, simple design. Moreover various type for expanding layout possibility. This stainless kitchen would change to hi-graded atmosphere in your LDK.

“Wall type”

## **Excellent storage with all slide drawer**

High capacity for storage

Using silent rail to open and close quietly

## **Atmosphere accent**

Upper side cupboard

Compact design for minimum necessity

## **Selected details of joint**

No seeing edge by 45 angle

Sharply sense of unity

# PATTINA KITCHEN

With the matte black frame, rough wood grain pattern, and Italian-made ceramic tiles, the frame kitchen “PATTINA” has a modern atmosphere as well as an enhanced vintage taste. Virtues of both old and new are expressed in this “old-fashioned” new design, created by combining a modern design with materials, and simple construction.

The design that leaves space between the floor and cabinet expresses a sophisticated delicacy and levitating lightness, by using 20mm-narrow L-shaped angles for the frame.

The counter top is Italian-made high-quality ceramic tiles. The product provides a sanitary and functional space for cooking.

Possible to make a set, body and top plate of color freely

## AM 01 Concept

This kitchen called AM 01 is a block (120 by 75 centimetres) that can either be positioned against the wall or remain free-standing in the middle of the room. Made of wood panels with two curved cabinet doors, the exterior is lacquered polychrome with three decoration possibilities, from monochrome to bright colours. Inside, the main functional elements have been resolved with the utmost attention to space, function and ergonomics. Also the aesthetics of the inside are immaculate, and the differences in material and colour compared to the outside create a sense of surprise when the cabinet is opened. Inside are shiny materials such as silkscreened glass and stainless steel. The three colour variants correspond to three distinct product trends – Classic, Fashion and Casual – to be selected according to the possible place of use, such as office, elegant home, or a room used by young people.

Profile  
Alessandro Mendini

This project is conducted by Alessandro and Francesco Mendini with Andrea Balzari. In 1989, the Mendini brothers opened Atelier Mendini in Milan. The Atelier has designed many different types of work in Italy and abroad. These include the Alessi factories; subway stations in Naples; the Olympic pool in Trieste; a tower in Hiroshima, Japan; the Groninger Museum in Holland; a city quarter in Lugano, Switzerland; an office building for the Madsack company in Hanover, Germany; and the high-speed train terminal in Gwangju, South Korea. Atelier Mendini has received many international awards. One is the 2003 Gold Medal for Italian Architecture at the Triennale di Milano. The Atelier has always been active in the industrial design sector, collaborating with many important companies in Europe and East Asia.

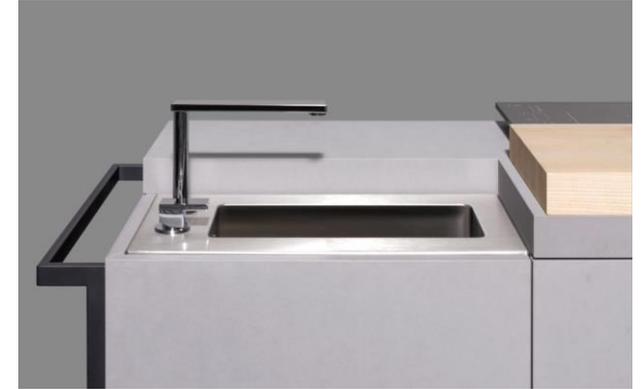

## QB 01 Concept

This year, for Eurocucina 2018, Bestetti Associati presents QB 01, the new compact kitchen drawing for Sanwa Company.

In the last 10 years, architecture and design have developed the idea that there should be no barriers and boundaries of any kind. Objects and architecture fit into a wider vision where the interior dialogues with the outdoor, what has always been fixed in tradition, now becomes mobile and the materials are no longer bound to an environment.

Flexibility, movement, functionality and essentiality are the main concept of this project. QB 01 is a compact volume on wheels that can be easily move from inside to outside and from one place to another.

Every space is thought to make the kitchen practice and functional: a wooden cut board cover the retractable sink, the portable induction hob could be placed inside the kitchen. There are also a little compact fridge and a drawer for cutlery. Wooden accessories complete QB 01 ; besides the wooden cut board, excavated in order to use it also as a tray, there are a knife block and a container for tools.

Profile  
Kicco Bestetti

He started his professional career in 1985 as worldwide Store Project Manager for B&B Italia.

By the year 1989 he joined the family business taking charge of architectural branch of national and international projects.

In 1995 he started his collaboration with Boffi Kitchens as Marketing Department Manager. During this period he developed and consolidated Boffi Kitchens image for Flag Ship Stores as well as Pluri Brand Stores, worldwide.

In 2000 he joined Studio Lissoni Associati staff until 2003, after that he created his own Studio with Antonella Terzoli.

He collaborated with Poliform and sales projects from 2005 to 2013. Bestetti Associati features many worldwide architectural and visual projects for companies such as: Paola Lenti, MDF Italia, Baxter, Molteni & C, Dada, Samsung, Candy Group, Cleaf and Giorgetti.

## EO 01 Concept

Elisa Ossino has designed “EO 01” kitchen for Sanwa Company, giving life to a cooking unit suitable for lofts, co-working spaces, studies, small interiors and informal situations. EO 01 kitchen responds to the needs of finding a solution for small-sized spaces, materializing one of the linchpins of the Japanese traditional way of living: the invisibility of some functional elements. Elisa Ossino has thus designed a small unit where the kitchen is in fact hidden behind a separating surface, projecting the user on the set of an Ozu’s film, where objects in a domestic scenery are kept hidden behind fusuma and shoji, the moving panels that continuously define the rooms structure. The cooking unit can easily be located in different areas of the house. EO 01 kitchen includes a dual induction hob, a sink, work surface areas and a set of elegantly shaped accessories, inspired by a minimal and simple design, including a chopping board, wooden boxes, shelves, compartments for the storage of knives and sponges, together with a few magnetic areas defined by lines. Minimalism, modernism, a great attention to materials selection: the EO 01 kitchen project puts the linchpins of design research at the heart, reinterpreting them with a radically new sensibility for the relationship between form and function.

Profile  
Elisa Ossino

Elisa Ossino is an architect and interior designer. Born in Sicily, she was trained in Milan, where she studied at Politecnico. In the year 2006, she established Elisa Ossino Studio focusing on art direction, set design, styling, residential and commercial interiors, product design. Her works combines geometrical abstraction, monochromes, metaphysical and surrealist references, giving birth to a coherent and allusive relationship between space, light, and objects. A sort of scenic suspension inspires Elisa's style, bringing in every project a peculiar form of lightness. Essential lines and geometries are the distinctive features of her designs, giving to the space they are located in a deep scenographic feeling.

## Production Model

## PATTINA COMPACT

With the matte black frame, rough wood grain pattern, and Italian-made ceramic tiles, the frame kitchen “PATTINA COMPACT” has a modern atmosphere as well as an enhanced vintage taste.

Virtues of both old and new are expressed in this “old-fashioned” new design, created by combining a modern design with materials, and simple construction. The design that leaves space between the floor and cabinet expresses a sophisticated delicacy and levitating lightness, by using 20mm-narrow L-shaped angles for the frame.

The counter top is Italian-made high-quality ceramic tiles. The product provides a sanitary and functional space for cooking.

The surfaces of the cabinet and doors use DAP (diallyl phthalate) resin sheets, which are currently manufactured only in Japan. It is an excellent decorative material with outstanding surface hardness, electric insulation, formability, and resistance to contamination, abrasion, heat, water, and chemicals. Since the material does not contain formaldehyde, it is also a green material that degrades into carbon dioxide and water by combustion.

\*Built-in appliances (faucet, cooker hob) are excluded

## GRAD45 COMPACT

The brand new compact size of "GRAD 45" is packed with Sanwa Company's passion for technology and design. It realized a renewed design giving a high-class look to the kitchen and paying great attention to details, such as side panels and fastenings not showing the edge of the doors. The vibrant finish of the stainless steel softens the glossy effect thus allowing its blending with different spaces.

The use of special fastenings with the made-in-Japan excellent metal processing technology, as well as the 45-degree cuts at the joint of the drawer and cabinet, provides a beautiful sense of unity that hides small edges. A stylish sink with sharp corners reflects Sanwa Company's craftsmanship technique. The fine vibrant finish gives a soft expression to stainless steel that obtains the typical texture of traditional Japanese handmade paper.

# CERAGINO

Ceragino stems from the company's long-standing experience and the know-how acquired in the design of kitchen furniture for tight spaces. It is the ideal choice for any home where living space is small; its essential design and limited overall dimensions make it suitable for installation in the centre of a living room.

Ceragino is the answer to the need for creating a comfortable space according to a veritable minimalist philosophy: doing away with all that is not strictly necessary.

# AFFILATO HIDE

Affilato Hide is a kitchen specially designed for very tight spaces and multifunctional facilities (one room apartments, offices, residences, etc). Its uniqueness lies in the possibility of hiding away the work area when it is not in use, or is not perfectly tidy, by closing the doors, so as to retain the aesthetic appeal of the kitchen in the environment it is part of. This highly sophisticated design project makes exclusive use of steel and has an extremely efficient high-tech heart.

# SENCY

## Body color

White

Black

\*Built-in appliances (faucet, cooker hob, fan), wall cabinet are excluded

Sency made full use of metal texture such as steel and stainless steel. Making the worktop and sides as thin as possible, it turned out in a simple, sharp and sophisticated design. The embossed paint allows a high-quality matt texture of the cabinet and one cannot easily notice soiling on the surface with a special process.

By making the thickness of the worktop and sides as thin as possible, the elements are reduced to their limits thus giving birth to a design composed only of lines and faces that harmonizes broadly not only with the modern spaces but also with the trendy industrial ones. Thanks to a specific bending process, the characteristic 5 mm frame is studied to enhance the user safety.

Vanity

# SENCY VANITY

Sency Vanity is a vanity utilizing the processing technology and materials known for its performance in the automobile industry developed into household appliances.

Taking full advantage of Japan's sheet metal working and welding techniques, the body does not use a single screw, and a sharp design was realized by minimizing the thickness of the worktop and the side panels. The embossed satin finishing coat reduces diffused reflection, giving a fine matte look as well as a forgiving feature for hiding stains. The minimal and clean design will fit not only a modern interior, but also the trendy industrial look.

Option

drainage cover

legs

# FINE VANITY

“Fine” is a wash stand whose frame design is the concept. The thin frame of the stand and the matching mirror maximize the sense of space in your bathroom. Because all of the screws are hidden within the design, Fine looks very simple and neat. Delivery is easier and the ultra-thin design allows for plenty of work space while your bathroom is being installed. There are two choices of frame color, black or white. The shelf board and drawer come in 4 color choices allowing you to coordinate to suit your own personal taste.

## \*\*Specification\*\*

# PATTINA VANITY

The surfaces of the cabinet and doors use DAP (diallyl phthalate) resin sheets, which are currently manufactured only in Japan. DAP is similar to melamine resin, and has an equivalent performance as melamine. It is an excellent decorative material with outstanding surface hardness, electric insulation, formability, and resistance to contamination, abrasion, heat, water, and chemicals. Since the material does not contain formaldehyde, it is also a green material that degrades into carbon dioxide and water by combustion.

With the matte black frame, rough wood grain pattern, and bowl made of black artificial marble, the frame washstand has a modern atmosphere with a hint of vintage taste.

\*Faucet, drainage are excluded

Washbasin

# ASSE

“ASSE” is a washbowl consisting of thin plates. Its stainless steel material – instead of artificial marble or ceramic – enabled this design. By using a right-angled bend process taking advantage of Japanese metal processing techniques, it is only expressed as lines and surfaces without R-corners. The user-friendly storage shelf adds an eye-catcher for the design. Drain hardware, including a perforated plate, is completely hidden to realize the beautiful design from every angle. Due to the metal material, the product is crack resistant. A hybrid coating (organic and inorganic) provides high durability.

# CARA

“Cara” is a washbowl of minimum thickness and flat surfaces, enabled by proud Japanese metal processing in both plating and welding.

Great performance is exerted in wet areas due to the base stainless steel with a hybrid coating (organic/inorganic) with high hardness and durability and low pollutants.

The matte monotone texture adds modern taste to a space, and open shelf provides a neat storage for bath items.

Right-angled bend process was used during plating, to realize a sharp and simple design for ultimate minimalism for any space. Unlike ceramics, high-temperature firing is unnecessary, contributing to a CO2 emissions reduction effect.

# Rettangoro Washbowl

With its bulky but simple form, the “Rettangoro Washbowl” has an impressive presence. Artificial marble enables the edgy square shape impossible to attain with porcelain, with a delustered matte texture.

The bowl designed with a minimized radius and seamless form, enhances maintenance performance as well as functionality, with a thick yet edgy appearance to make the depth of the washbowl unnoticeable.

The sharp design of the towel bar becomes an eye-catcher of the space. Due to the simple design accommodating both excellent decorativeness and functionality, it fits into any bathroom space.
