

ROSSINI LEATHER COLLECTION

ROSSINI Leathers tanning process 100% MADE IN ITALY

Leather is a beautiful natural and long-lasting product, it can last a lot longer than fabric. It is very easy to clean, and it is warm in the winter and cool in the summer. Most of Rossini leather hides are of European origin and the tanning process is 100% MADE IN ITALY.

Some leathers are more protected and are recommended for families with kids, and some less protected. The less protected leather is, the more prestigious and soft will the surface appear to the touch. On all leathers due to the natural elasticity, wrinkling cannot be avoided. Also on most leathers, you will see natural characteristics such as stretch marks, insect bites, scars and color variation, which confirms that the hides are very high quality.

High Protected Leathers

Means that these leathers went through an Italian tanning process that creates a heavy- pigmented finish coat on the surface of the hides that becomes a barrier against spills, stains and fading. On High Protected leathers due to the natural elasticity, wrinkling cannot be avoided. We recommend High protected leathers for families with children and for areas with a very high use. These leathers are also very easy to clean and the top grain has a long lasting durability. (SEE grade 25 Mellow)

Medium Protected Leathers

Means that the hides are slightly embossed for protection, but still are very soft to the touch, have a warm feeling and timeless appeal. On Medium Protected leathers due to the natural elasticity, wrinkling cannot be avoided. These are our most popular full grain leathers and are also a good choice for families with kids. (SEE grade 38 (Arcobaleno, and Nature)

Low Protected Leathers

Means that the original surface of the hide has not been touched so it can maintain extra softness and natural beauty. These are expensive, prestigious European hides called full aniline and full top grain hides. The beauty of these leather is natural characteristics such as scars, stretch marks and slight color variation. On Low Protected leathers due to the natural elasticity, wrinkling cannot be avoided. These natural aniline leathers are delicate and require attention to maintain their beauty over time. No food or drinks to avoid damage to the leather as stains cannot easily be removed. SEE grade 40 (Emotion, Maya, Colorado), grade 50 (Caress) and grade 60 (Sensation). We do not recommend these leathers for families with children.

Cat. 25 Mellow – High Protected Leather

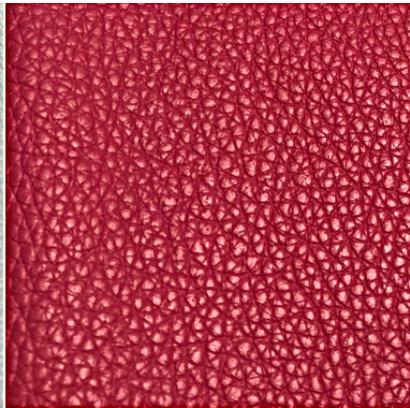

This cow leather is a semi-corrected pigmented leather that offers a very soft hand with a fine protective coating. It is a thick leather with even consistent color and its own individual personality. Thickness 1.6 mm. Tanning process 100% MADE IN ITALY.

Leather article CLASSIC, has a great role in the category of the high-quality coverings. The name itself expresses an evergreen concept which makes this article unique.

The main characteristics of Classic leather article is the depth of shade, transparency and brightness. The hand is round with a silky touch. The small grain surface is obtained thanks to a special vacuum drying tanning process, that keeps the leather naturalness. This vacuum drying tanning process is mainly used in leather goods and leather garments sectors, in order to give the leather a fullness effect and keep the surface unchanged, allowing to highlight the depth of shade and different natural nuances. Classic leather article has a thickness of 1.1 – 1.3 mm. The finish process enhances the look and warmth and gives this leather a pleasant touch.

Specific Leather Care: Avoid direct sunlight. Avoid exposure to heat sources. Clean with a dry cloth, do not use of chemical cleaner.
