

BLOSS

BLOSS

NATURAL ATTITUDE FOR
LUXURY GREENERY

ORIGINALITY WITH ADDED VALUE

THE UNIQUE PLANTER SYSTEM IN TERMS OF QUALITY, DESIGN AND INNOVATION

BLOSS, the first modular planter system in stainless steel, was born from the creativity of a young designer and several decades of experience in working steel.

Inspired by geometries and rigour of historical Italian gardens that have embellished for centuries the exteriors of noble dwellings, Bloss allows recreating elegant and sought-for, modern or traditional outdoor architectures simply and without requiring specialised labour.

In fact, Bloss is a planter system consisting of over 300 modules of different shapes and sizes, three standard heights and three depths and assorted accessories. Whether in bright colours or neutral finishes, it allows choosing the most suited aesthetic and functional solution, becoming an integral part of the outdoor or indoor, private or public space. Moreover, Bloss offers quick and effective solutions in terraces and gardens for screening or containment purposes, without requiring any masonry works.

BLOSS quality and elegance are the result of production strictly Made in Italy. Choosing BLOSS means being able to rely on a unique system of planters. Inimitable thanks to the design features, quality of materials and innovation of production processes.

The system that in addition to planters foresees a series of accessories constantly innovated, is studied to better respond to the vital needs of plants and furnish dehors with flexibility and elegance. Each order is tracked so that the client can request it again, even after many years.

ORIGINALITÀ DI VALORE

IL SISTEMA DI FIORIERE UNICO PER QUALITÀ, DESIGN E INNOVAZIONE

Dalla creatività di un giovane designer e dall'esperienza pluridecennale nella lavorazione dell'acciaio, è nato BLOSS, il primo sistema modulare di fioriere in acciaio inox.

Ispirato dalle geometrie e dal rigore degli storici giardini all'italiana che da secoli abbelliscono gli esterni di nobili dimore, Bloss permette di ricreare architetture all'aperto eleganti e accurate, contemporanee o tradizionali, con semplicità e senza l'ausilio di manodopera specializzata.

Bloss infatti è un sistema di fioriere con oltre 300 moduli di forme e dimensioni diverse, tre altezze e tre profondità di serie e una vasta dotazione di accessori. Utilizzato con colori accesi o finiture neutre permette di scegliere la soluzione estetica e funzionale più adeguata, diventando parte integrante dello spazio outdoor o indoor, privato o pubblico.

Bloss fornisce inoltre soluzioni rapide ed efficaci in terrazzi e giardini per il mascheramento e il contenimento, senza alcuna opera muraria.

Qualità e eleganza BLOSS sono il risultato di una produzione rigorosamente Made in Italy. Scegliere BLOSS significa poter contare su un sistema di fioriere unico. Inimitabile per le caratteristiche progettuali, la qualità dei materiali, l'innovazione dei processi produttivi.

Il sistema, che insieme alle fioriere prevede una serie di accessori in costante aggiornamento, è studiato per rispondere al meglio alle necessità vitali delle piante e per arredare dehors con flessibilità e eleganza. Ogni commessa è tracciata in modo che il cliente possa richiedere lo stesso ordine anche a distanza di anni.

 Internal perimeter insulating mat, 10 mm thick
 Isolante perimetrale interno, spessore mm 10

M3000.000
 Internal perimeter insulating mat, 30 mm thick
 Isolante perimetrale interno, spessore mm 30

GREEN QUALITY

Bloss design, functionality and beauty last forever. Quality that starts with stainless steel. Indestructible material, which remains unchanged over time and does not warp under hot or cold temperatures. And it is **100% recyclable**.

Stainless steel: the king of sustainable materials. Recyclable, clean and **durable**: what makes stainless steel one of the most sustainable materials in the world. Stainless steel withstands corrosion and is widely known as one of the most **durable** building materials ever. It is **completely recyclable** and can be reused several times in different applications.

Another material used by BLOSS is aluminum.

Aluminum is easily recyclable by melting. Melting is fundamental because makes **100% recycling possible ad infinitum**, only requiring 5% of electricity for primary aluminum production.

BLOSS makes a sustainable choice even when it comes to colors.

With low environmental impact, **powder coatings** used by Bloss do **not require ozone-depleting solvents and do not generate production waste**.

The application method used by Bloss also offers important advantages, as it allows powder coatings to be applied with a single layer process, with any excess powder collected and reused.

The result is long-lasting protection, which reduces the need for substitute products or coatings.

GREEN QUALITY

Design, funzionalità e bellezza BLOSS durano per sempre. Una qualità che inizia dall'acciaio inox. Un materiale indistruttibile, che resta inalterato nel tempo ed è indeformabile al caldo e freddo. Ed è **riciclabile al 100%**.

Acciaio inox, il re dei materiali sostenibili. Riciclabile, igienico, duraturo: cosa rende l'acciaio inox uno dei materiali più sostenibili al mondo. Il termine "inox" sta per "inossidabile" poiché questa tipologia di acciaio è in grado di resistere alla corrosione. L'acciaio inox è noto a tutti per essere uno dei materiali da costruzione più **durevole** in assoluto. L'acciaio inox è **completamente riciclabile** quindi può essere riutilizzato più volte in differenti applicazioni.

Un altro materiale utilizzato da BLOSS è l'alluminio.

L'alluminio è facilmente riciclabile per fusione. Questa pratica è fondamentale perché **riciclabile all'infinito, al 100%** e con l'utilizzo del solo 5% di energia elettrica necessaria per la produzione di quello primario.

BLOSS fa una scelta sostenibile anche per i colori.

A basso impatto ambientale, le **vernici** a polvere usate da BLOSS **non richiedono solventi dannosi per l'ozono e non generano scarti di produzione**.

Anche il metodo di applicazione utilizzato da Bloss offre dei vantaggi importanti, in quanto consente di applicare le vernici a polvere con un processo a strato singolo, mentre la polvere in eccesso può essere raccolta e riutilizzata. Il risultato è una protezione di lunga durata, che riduce la necessità di ricorrere a prodotti o rivestimenti sostitutivi.
