Office Pavilions

Kettal's pavilions are a flexible alternative designed to create dynamic workspaces. The idea behind Kettal's Office Pavilions is to give shape to big, open spaces, both indoors and outdoors, or to separate one area from another. The L&H system is made up of movable walls capable of creating secluded rooms to optimize the acoustics in open-plan office spaces. The wide array of colour and material finishes for walls and ceilings, including aluminium, wood, fabric and glass, as well as the integrated automation feature, makes this product as personalized as they come.

The background is a complex, abstract geometric pattern. It consists of various rectangular and square sections, each filled with a different orientation of thin, parallel orange lines. The lines are set against a solid teal background. The orientations include vertical, horizontal, and diagonal (both 45 and 135 degrees). The pattern is composed of several overlapping and adjacent rectangular blocks of different sizes and orientations, creating a sense of depth and movement.
