PRESERVED NATURAL PLANTS AND GREENERY

WHAT ARE PRESERVED PLANTS AND GREENERY?

Preserved plants and greenery are completely natural and eco-friendly. Result of a unique conservation's process which consists of replacing of the natural sap with a biodegradable preservation treatment based on vegetable glycerine

ADVANTAGES

Preserved trees, plants and flowers do not require any maintenance and do not suffer impact of indoor environment.

You can maintain the precious flora throughout the year in a closed environment.

- No need of irrigation
- No need of soil
- No need of light
- No growth: the volume remains constant and controlled
- Ability to have outdoor plants for indoor

INSTRUCTIONS AND ADVICES

Preserved greens are completely natural. Here are some precautions to ensure freshness and optimal lifetime:

- Do not expose to direct sunlight
- Do not irrigate, spray or wipe with water
- Only for indoor use
- Keep optimal humidity at between 50% - 70 %

MAINTENANCE

Preserved plants are not static, the dust do not stick on them. Recommended occasionally clean with soft compressed cold air. Max 1 bar

SUSTAINABLE AND ECO-FRIENDLY

Our plants are grown on farms all over the world and then preserved with a rigorous and natural process. By choosing to use preserved plants, you also choose to save water as well as energy: they don't need to be watered or fertilised, saving thousands of litres of water per years

100% BIODEGRADABLE

The freshly harvested plant enters a proprietary process to absorb a specific mixture of 100% plant-based and bio-degradable preservation formula.. The preservation liquid replaces the sap and water within the plant, effectively forming a still-image of nature, creating a unique and 100% natural product. The preserved flowers and plants remain beautiful and unchanged for many years without watering, light nor any maintenance.

NON-TOXIC AND NON-ALLERGEN

The vegetal preservation is a unique and ecological process. The preservation treatment is done without addition of any toxic or dangerous chemicals or components. All of our products can be touched by pets and people, they do not represent a health hazard. Furthermore, since the plant is preserved, there is no soil, no humidity, no pollen, so it is perfect for people with allergies or hospitals.

NATURAL SOUND BARRIER

The necessity of reducing sound reverberation in interiors has been a recurrent challenge for architects and interior designers. They've continually looked for ways to combine aesthetic considerations with insulation requirements. Now, preserved plants are increasingly seen as the perfect answer to this problem.

A living wall acts as a sound barrier to the building: It absorbs 41% more sound than a traditional facade.

SAVE THE PLANET

CANSIGLIO

7522713.00

modular panel 100 x 100 cm

Modular panel (100 x 100 cm) for preserved Vegetal Green Wall made of natural preserved flat moss, polemoss and foliage. Preserved plants are completely natural and eco-friendly

LICHENE

modular panel 100 x 100 cm

Modular panel (100 x 100 cm) for preserved Vegetal Green Wall made of natural preserved flat moss and polemoss. Preserved plants are completely natural and eco-friendly

OUTDOOR ARTIFICIAL VERTICAL GARDEN

The opportunity to have a unique and enviable hedge is now given!
An artificial hedge is the answer for those who want to save time, money, health and for those who want to save the environment.

- Closure of irrigation systems, thus saving water.
- No maintenance, no need to cut, clean, fertilize.
- Resistent to UV rays.
- Full chemical resistance in case of spills such as, detergents, beverages or acid rain.
- Conservation of its mechanical properties allows a particularly high load capacity, even at very extreme temperatures from -40°C to $+70^{\circ}$

VG

VERTICAL GARDEN

VG is at designers and contractors disposal to design and produce custom-made artificial vertical walls, suitable solutions for any indoor and outdoor environment, fully bespoke for each customer.

Each vertical garden is equipped with an OSB panel (Oriented Strand Board) in green colour, peculiar feature of our vertical gardens, to facilitate its fixing to the wall.

The panel is highly resistant and waterproof, therefore perfect for moist spaces or for outdoor installations
