## Wood-Burning Stoves

MAKE MORE OUT OF YOUR HOME.

A woodburning stove not only heats your living room. No, he can do much more. He ensures the right comfort. And he enhances the ambience. Such a fancy stove makes your home something special – all year round.

## Wood-Burning Stoves

NOT ALL STOVES ARE CREATED EQUAL!

Large glass panes (which remain all clean), low emissions with high efficiency and plenty of passion for detail in design and function make our stoves so special. Just appropriate for your precious leisure hours in front of the flaming fire!

## Wood-Burning Stoves

A LOT OF GLASS BRINGS FIRE INTO YOUR LIVING ROOM. Huge glass panes, bilaterally or even tri-laterally vitrified wood stoves bring a flame picture into your home beyond compare. Ideal, if the fire can be looked at from different views of the room.

## Heat storage

with the Heat Memory System and **Xtra** technology!

Often desired, but rarely found in the wood stove business: the fast heat, for which wood stoves are known and liked for, should also be combined with long-lasting heat storage.

## Heat Memory System

The Heat Memory System developed by Austroflamm is a very heavy material (specific weight above 3!), which can absorb warmth especially well and releases it for a long period of time. This material is of course patented.

Austroflamm's Heat Memory System makes impossible 8 hours of heat emission possible (and it still remains a fast heating system)!

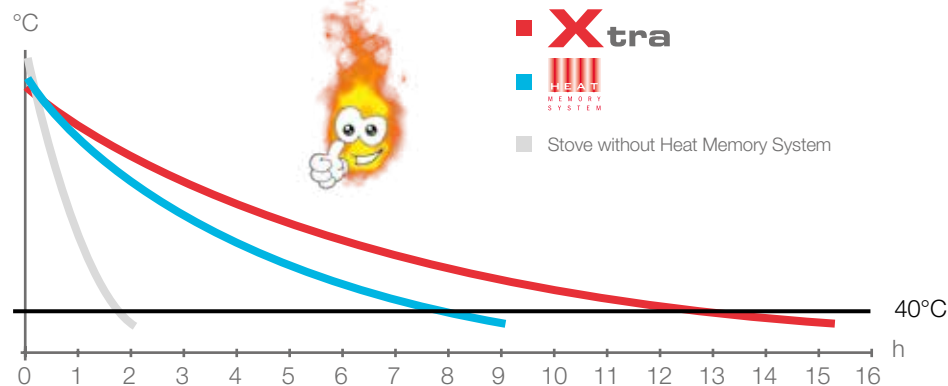

New: **Xtra**-  
*stores warmth  
even longer now!*

The progressive development of the approved Heat Memory System probably offers the best heat storing: we combine the Heat Memory System with a special heat exchanger, stow more than 100 kg of it onto the Xtra models and additionally equip these stoves with an adjustable convection air which can even be shut off.

**The result is a more than 12 hours heat release with less than 9 kg of wood!**

> Tower Xtra 2.0 without claddings and with 130 kg of heat storing material

# Pellet Stoves

HAVE YOU SEEN THAT FIRE? IT'S A PELLET FIRE. Owed to the smart burning technology our pellet stoves have an especially long and calm flame – most likely the most beautiful pellet flame on the market. Of course all these stoves are super-silent and very easy to handle – even time- or thermostat-controlled. As desired also controllable by Smartphone.

Izzy and Ron even work without electricity!
