PROFILES – TO THE NEXT LEVEL

Have you ever wondered what makes Modular Lighting Instruments who we are? Our range of profiles is the perfect example of that. We took a basic functional product and brought it to the next level. How? By staying true to our principles and constantly aiming for the perfect balance between sleek design, technological innovation and the steady growth of the number of possible applications. Because of this, our profiles can now blend in with every design, even in a residential or hospitality setting.

Profiles have been around for a long time, but they’ve mostly been relegated to industrial environments and office spaces. To ensure they could fit into other and more aesthetically demanding locations, we have actually made them an integral part of the architectural design. With extreme attention to detail in design – no visible screws and the use of magnetic end plates for example - and the integration of some cutting-edge technological innovations - like lenses - we’ve turned mere functional objects into exciting instruments. In fact, thus taking the creativity of designers and architects to the next level.

At Modular, we’re constantly thriving to expand the amount of possible applications for our products, including profiles. Therefore, we made our profiles available in warmer colour temperatures so that they could also - quite rightly - feature in residential or hospitality projects where a softer, warmer and more relaxing type of light is required. On top of that, the Modular profiles can be used for both general lighting or accent lighting, while they offer you recessed, surface-mounted (for both ceiling and wall) and suspended options for installation. The range of profiles includes ready-made options in fixed lengths as well as made-to-measure solutions, which allows you unlimited flexibility.

This is what we do. This is what makes us excited. Persistently working on new applications and innovations that allow designers to play around with our luminaires and come up with bold and original designs. The range of Modular profiles serves as an invitation to think outside the box. Or even forget the box altogether.
