METALLO

Elemento chimico dotato di buona conducibilità termica ed elettrica, elevata tenacità, duttilità e malleabilità che lo qualificano come uno dei materiali maggiormente utilizzati a livello industriale. Caratterizzato dal potere riflettente e dall'opacità alla luce è in grado di formare con l'ossigeno ossidi a carattere più o meno spiccatamente basico.

METAL

A very strong, ductile and malleable chemical element with good thermal and electric conductivity that make it one of the most widely used materials for industrial applications. Standing out for its reflective power and opaqueness to light, it can bind to oxygen to form more or less alkaline oxides.
