The contents of this catalog are protected by Intellectual Property Law, Royal Decree 1 / 1996. Any reproduction of it, in whole or in part, without the consent of Porelanosa Grupo is liable under the Penal Code.

The suspended ceiling fonotech of **butech** (Porcelanosa Grupo) offer an ideal constructive solution in spaces that require have facilities of various kinds on the ceiling.

Its ease of handling when dealing with removable ceilings and the different mechanizations, will favor the adoption of a great variety of elements such as lighting, ventilation grilles, speakers, fire systems, as well as any system to be run through the ceiling eliminating completely the visual impact to be hidden inside the vault produced by the false ceiling.

This aesthetic function is complemented by the acoustic performance of our ceilings. Their different levels of drilling and various diameters of the same, absorb acoustic waves attenuating them by an acoustic veil thermoadhered on the inside of the ceiling.

The range of ceilings fonotech of **butech** (Porcelanosa Grupo), provides its users with various models to adopt the ideal solution for every space, covering solutions adapted to large surfaces that require a constant handling (airports, hospitals, shopping centers, offices, etc.), high moisture environments and solutions that stand out for their elegance and beauty in representative areas (housing, meeting rooms, conference rooms, exhibition halls, etc.).

From **butech** (Porcelanosa Grupo) invite you to visit our false ceilings fonotech consulting this catalog, which will represent a help to guide you in selecting the constructive solution that best suits your project, giving the space a technical, aesthetic, practical and timeless solution.

# Metalic ceilings fonosteel

False modular false ceiling of removable acoustic sheets and freestanding made by galvanized steel sheet or aluminum alloy sheet.

This range, designed for areas that require intensive handling of the false ceiling, consists of wide variety of formats, drilling and profile, making it the most versatile range on the market.

## features

- High resistance to handling.
- Easy installation and removal.
- Resistance to traction (ability to accommodate lighting and other facilities).
- Ease of mechanized and cutting.
- High resistance to corrosion by external agents.
- Adaptability to multiple spaces.
- Minimum maintenance.

# steel lis spa

## Material

### Galvanized steel tray

- Galvanized steel in cold lacquered in continuum.
- Galvanization treatment with 95 grams per square meter.
- Alloy of the coating 95% zinc and 5% aluminum.
- Thickness of 0.53 mm. +- 5% according to accepted standards of iron and steel industry.
- Incombustible material M0.
- A2 s2 d0 Euroclass
- Material with high resistance to corrosion by treating postlacquered at two sides.

### Aluminum tray

- Aluminum of alloy 3105 according to standard AA
- Hardness H16 according to UNI EN 10002.
- Thickness of 0.6 mm +- 8% according to accepted standards of iron and steel industry.

## Formats

- 600 x 600 mm

## Mechanized

- Trays without drilling

## Finish

### Postlacquered RAL to choose

- Pretreatment of grease removal coating and phosphatized of the surface of the plate.
- Lacquered with electrostatic process with application of epoxy-polyester resins in thermosetting powder.

## Structure

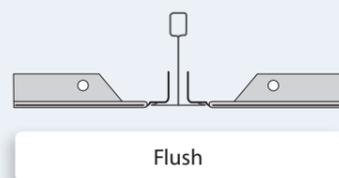

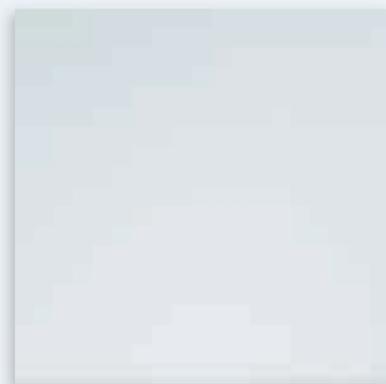

- Profile System T15 - T24, grade, specially designed for harsh environments.
- Profile of galvanized steel with polyester resin treatment for greater resistance to high moisture, fumes of chlorine and other corrosive elements.

## Recommended uses

- Excellent solution for high humidity areas such as bathrooms, spas, indoor pools...

## Packaging

- Cardboard boxes of 24 pieces. (8.64 m<sup>2</sup>/box).

# Installation Tegular profiles

1. Lay out the surface where the ceiling will be installed.

2. Install the stud to the floor slab and the threaded rod. (Install one stud and one rod per m<sup>2</sup>.)

3. Install the hanging pieces in the primary profiles.

4. Join the primary profile with the rod using the nuts. (Use two nuts for each hanging piece)

5. Join the primary profiles when the room dimension is larger than that of the profile.

6. Check that the primary profiles are leveled.

7. Install the 60 cm and 120 cm secondary profiles.

8. Use these two profile types to make the grids, from where the plates will be located.

9. Rest the clips on one of the profiles.

10. Exert pressure forward while we start raising the plate.

11. The plate will be fixed within the grid.

# Installation Clip-in profiles

1. Lay out the location of the ceiling elements.

2. Mark the location of the hangings and make the holes.

3. Install the stud and the threaded rod.

4. Install the clamping flange and the bearing profile.

5. Join the suspension flange with the rod using the nuts.

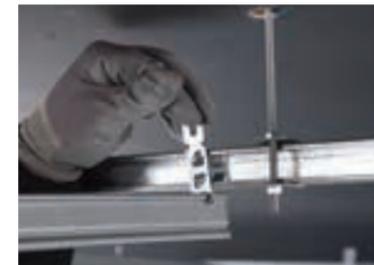

6. Install the joint load-bearing profile to join two load-bearing profiles, when necessary.

7. Join two profiles, leaving the joint piece at the profile ends.

8. Check that the profiles are leveled.

9. Install the profile joining clip and the Clip-in profile.

10. Install the Clip-in profile joint when necessary.

11. Install the trays in the Clip-in profiles by exerting a slight pressure

# Installation grooved profiles

1. Lay out the location of the ceiling elements.

2. Mark the location of the hangings and make the holes.

3. Install the stud and the threaded rod.

4. Install the hanging piece and the grooved profile.

5. Join the hanging piece with the rod using the nuts. (Use two nuts for each hanging piece)

6. Install the joint piece at the profile ends.

7. Join two profiles, leaving the joint piece at the profile ends.

8. Check the trays resting on two profiles using the plate tabs.

9. Install the trays resting on two profiles using the plate tabs.

10. Continue installing the trays, adjusting them until there is no free space between them.

## How to get a budget of a butech system.

- Come to one of our stores/ distributors, where you will be attended by our professionals, who will show you the products that best suit your needs.
- To provide you with the best service, you should provide us the plans of the project and fill a study sheet customized to your product.
- Once delivered the plans and the sheet correctly completed, from the Technical Department of butech, a first budget will be done.
- In less than 15 days, the same professional who attended you will deliver the budget.
- In case of acceptance, and if you wish, you will receive the visit of one of our technicians for the preparation of the final budget.
