

accessori per pareti divisorie

Sistema modulare per
pareti divisorie interne,
allestimenti fieristici
e componenti d'arredo.

accessories for partition walls

*Modular system for inside
partition walls, stand
building and furnishing.*

Mini:

Mini è una gamma completa di accessori per pareti divisorie interne ed espositive tutte in vetro. La linea si basa sul concetto di facciata strutturale ma i relativi accessori sono stati semplificati in modo da poter essere utilizzati in qualsiasi ambiente con estrema facilità.

Mini è stata inizialmente pensata come semplice supporto per pareti divisorie interne ma, in fase di realizzazione, si è evoluta in una gamma completa di accessori atta a risolvere svariate problematiche ed esigenze, adattabile a qualsiasi tipo di ambiente attraverso le diverse combinazioni possibili.

Partendo da questo concetto si è arrivati a progettare un sistema multifunzionale adatto, non solo a semplici pareti divisorie, ma anche a pareti multifunzionali in grado di integrarsi facilmente a spazi diversi e che permettano un frazionamento degli interni in modo duttile e modulare. Questo sistema si presta quindi alla realizzazione di sistemi espositivi flessibili utilizzabili con vetro, policarbonato o legno, composti da pareti con mensole e divisori, particolarmente indicati per uffici, arredamento di negozi ed esposizioni fieristiche.

La serie Mini nasce dalla collaborazione di Nuova Oxidal con un esperto designer che ha saputo coniugare le esigenze tecniche con attenzione al design ed un'estetica

Mini:

Mini is a complete range of accessories for indoor glass partitions and furnishings. The collection is based on the concept of structural façades, but its accessories have been simplified so as to be easily employed in whatever environment.

Mini was initially conceived as a simple support for indoor dividing panes. During implementation it evolved into a complete range of accessories with versatile solutions, suitable for different needs and environments through the widest spectrum of possible combinations. Thus from the initial concept a multifunctional system was developed, suitable not only for indoor partitions, but also for multifunctional panes easily employed in different environments, allowing a flexible and modular separation of space. The system enables to create flexible exhibition spaces, in glass, polycarbonate or wood, made of panes with shelves and separators, especially suited for offices, stores and trade fairs.

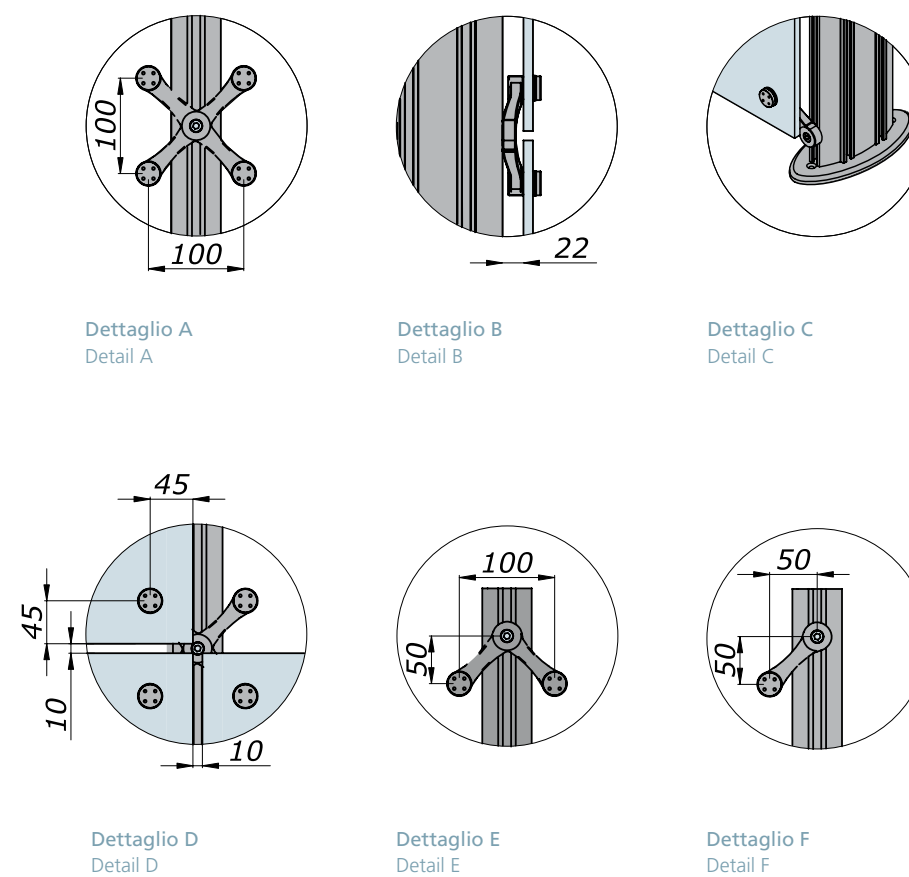

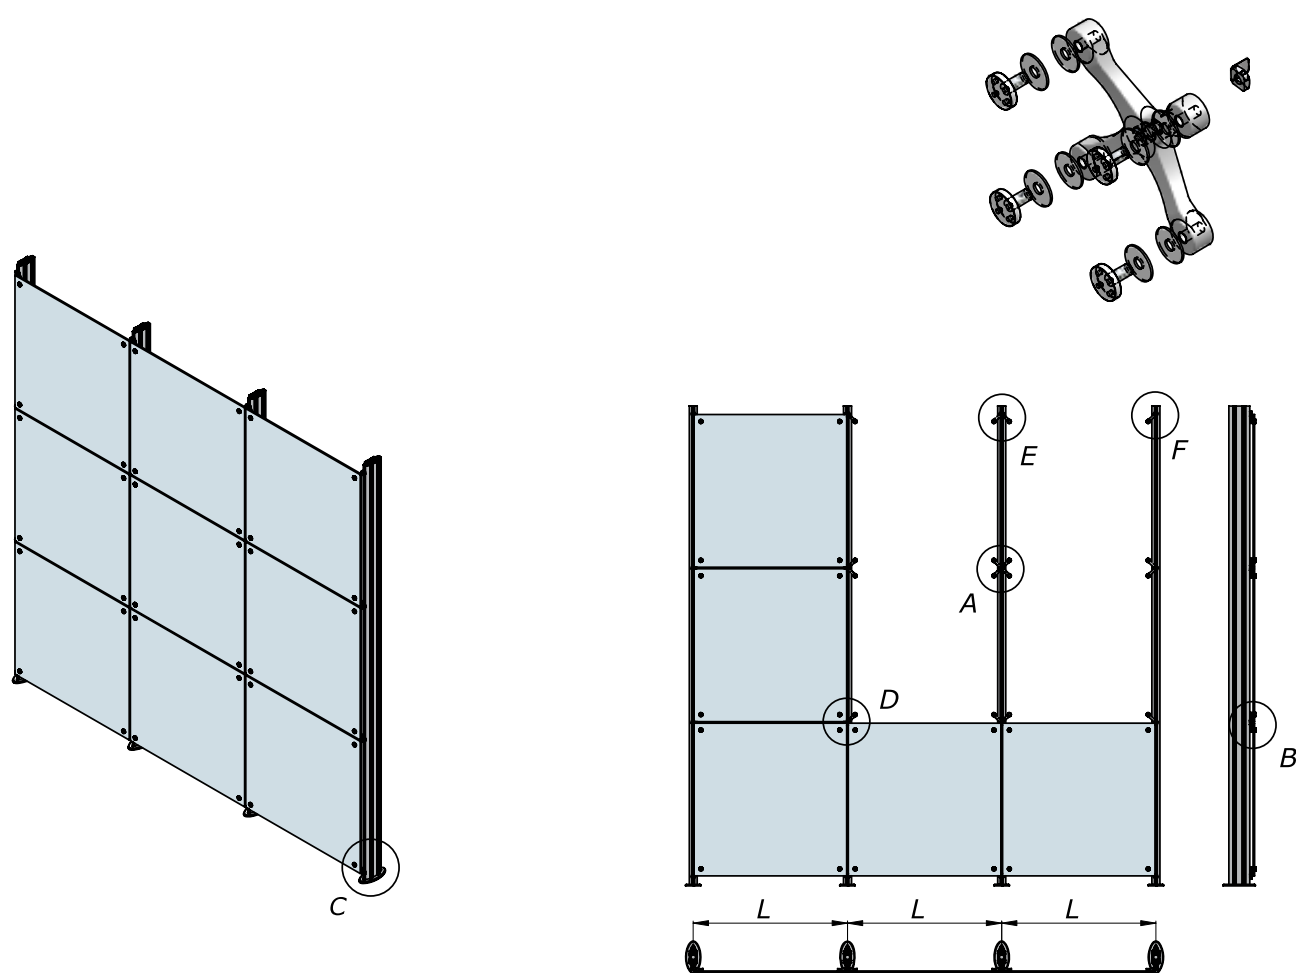

The Mini series is the result of Nuova Oxidal's collaboration with an experienced designer, blending technical requirements with a care for design and a truly contemporary look.

Supports are made in aluminum with standard anodized silver finishing or in transparent material and an interaxis of 90 mm. They are available in the one, two, three and four-arm versions. In spite of small dimensions, new Mini accessories can still support up to 50 kg per arm. Supports can be matched to two different

contemporanea. I supporti sono stati realizzati in alluminio con finitura standard ossidata argento e in materiale plastico trasparente. Hanno un interasse di 90 mm e sono disponibili nelle versioni a uno, due, tre e quattro bracci; nonostante le piccole dimensioni, i nuovi supporti Mini sono comunque sufficientemente resistenti per carichi fino a 50 Kg. per braccio. Ai supporti possono essere abbinati differenti tipi di borchie e l'adattatore per l'utilizzo di viti svasate. Il sistema include un innovativo profilo di sostegno che, grazie a diversi incavi, permette il fissaggio non solo dei supporti ma anche di vari accessori su tutti e quattro i lati. Il trafilato è stato studiato cercando di realizzare una struttura multifunzionale che oltre a consentire il fissaggio di strutture leggere permetta anche di sostenere carichi elevati, è infatti possibile irrigidire la piantana all'interno e rendere quindi possibile l'aggancio di altri elementi di costruzione. La gamma si completa inoltre di una serie di connessioni, piedi, traversi e blocchetti di fissaggio che rendono possibile l'aggancio di tutti gli elementi senza effettuare forature sul profilo e permette quindi al sistema di essere rivoluzionato a seconda delle esigenze.

types of studs and the adaptor to be used with countersunk screws. The system includes an innovative side support profile which, thanks to different slots, allows the fixing not only of supports but also of various accessories on all four sides, as well as the combining of several fixing and shelf-support elements. Drawing was devised in order to create a multifunctional structure that allows the fixing of light structures but can also support high loads. It is in fact possible to strengthen the standard support profile from the inside, as to allow the attachment of further construction elements.

The range also includes a series of connections elements, supports, crossbeams and fixing blocks that enable the fixing of all elements without making holes on the main support structure. The entire system can be easily changed and adapted according to specific needs.
